PROFESSIONAL SUMMARY

Software Engineering student pursuing an Integrated M.Tech at VIT-AP University, with a track record of shipping full-stack applications and machine learning systems from design through deployment. Led a 3-person team to build a real-time computer vision system achieving 90% gesture-recognition accuracy, and built an XGBoost model that reached up to 98% accuracy on clinical diagnostic data, outperforming four other candidate models. Proficient in Java, Python, JavaScript, React.js, Node.js, Flask, and SQL.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL

Frontend: React.js, HTML5, CSS3

Backend: Node.js, Flask, REST APIs

Machine Learning: OpenCV, MediaPipe, XGBoost, Pandas, NumPy, Scikit-learn, Feature Engineering

Databases: SQL, DBMS

Tools: Git, GitHub, VS Code

Core Concepts: Data Structures & Algorithms, OOP, SDLC, Agile Methodology

EDUCATION

VIT-AP University

2021 – 2026

Integrated M.Tech in Software Engineering

CGPA: 7.20

PROJECTS

Hand Sign Gesture Detection | *Project Lead & Python Developer*

Technologies: Python, Flask, OpenCV, MediaPipe

- * Led a 3-person team to design and build a real-time hand gesture recognition system that classified 10 distinct gestures from live video streams using OpenCV and MediaPipe.
- * Tuned the hand-landmark detection and image preprocessing pipeline to achieve approximately 90% classification accuracy.
- * Integrated the computer vision backend with a Flask web application to serve real-time gesture predictions.
- * Owned end-to-end delivery including debugging, testing, and deployment.

Portfolio Website | *Project Lead & Full Stack Developer*

Technologies: React.js, Node.js, HTML5, CSS3

Live: saivikas-portfolio-ivory.vercel.app

- * Designed and built a responsive portfolio website with reusable React components to showcase projects, skills, and certifications.
- * Built a Node.js backend for handling contact form submissions and routing.
- * Optimized component rendering and asset loading for fast page performance.
- * Deployed the application using Vercel and managed source code with Git and GitHub.

Thyroid Disease Detection Using Machine Learning | *Data Analyst & Machine Learning Developer*

Technologies: Python, XGBoost, Flask, Pandas, Scikit-learn

- * Cleaned and engineered features from a clinical dataset consisting of thousands of patient records.
- * Trained and compared Logistic Regression, Decision Tree, Random Forest, SVM, and XGBoost models.
- * Achieved 95–98% accuracy with XGBoost and validated results using F1-score and hyperparameter tuning.
- * Integrated the trained model into a Flask web application for real-time thyroid disease prediction.

CERTIFICATIONS

- Machine Learning – NPTEL
- Web Development – Corizo
- Generative AI – Outskill
- Coding & Technical Training – GeeksforGeeks
- MATLAB Programming – MathWorks
