PROFESSIONAL SUMMARY

Software Engineering student pursuing an Integrated M.Tech at VIT-AP University, with a track record of shipping full-stack applications and machine learning systems from design through deployment. Led a 3-person team to build a real-time computer vision system achieving 90% gesture-recognition accuracy, and built an XGBoost model that reached up to 98% accuracy on clinical diagnostic data, outperforming four other candidate models. Proficient in Java, Python, JavaScript, React.js, Node.js, Flask, and SQL.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, SQL | Frontend: React.js, HTML5, CSS3 | Backend: Node.js, Flask, REST APIs
Machine Learning: OpenCV, MediaPipe, XGBoost, Pandas, NumPy, Scikit-learn, Feature Engineering | Databases: SQL, DBMS
Tools: Git, GitHub, VS Code | Core Concepts: Data Structures & Algorithms, OOP, SDLC, Agile Methodology

EDUCATION

VIT-AP University 2021 – 2026

Integrated M.Tech in Software Engineering | CGPA: 7.20

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming, Software Engineering, Artificial Intelligence, Machine Learning

PROJECTS

Hand Sign Gesture Detection — Project Lead & Python Developer

Technologies: Python, Flask, OpenCV, MediaPipe

- Led a 3-person team to design and build a real-time hand gesture recognition system that classified 10 distinct gestures from live video streams using OpenCV and MediaPipe.
- Tuned the hand-landmark detection and image preprocessing pipeline to reach approximately 90% classification accuracy.
- Integrated the computer vision backend with a Flask web application to serve real-time gesture predictions to end users.
- Owned end-to-end delivery — debugging, testing, and deployment — as the sole team lead.

Portfolio Website — Project Lead & Full Stack Developer

Technologies: React.js, Node.js, HTML5, CSS3

Live: saivikas-portfolio-ivory.vercel.app

- Designed and built a responsive 5–6 page portfolio site with 10–15 reusable React components to showcase projects, skills, and certifications across desktop, tablet, and mobile.
- Built a Node.js backend to handle contact form submissions and application routing.
- Tuned component rendering and asset loading so the site consistently loads within a few seconds on a standard connection.
- Deployed to Vercel and managed version control through Git and GitHub.

Thyroid Disease Detection Using Machine Learning — Data Analyst & Machine Learning Developer

Technologies: Python, XGBoost, Flask, Pandas, Scikit-learn

- Cleaned and engineered features from a clinical dataset of 3,000–7,000 patient records across 20–30 features, including hormone levels and medical history.
- Trained and benchmarked 5 models — Logistic Regression, Decision Tree, Random Forest, SVM, and XGBoost — selecting XGBoost after it reached 95–98% accuracy and a 0.95–0.98 F1-score, 1–3 points above the next-best model (Random Forest).
- Validated model performance through hyperparameter tuning and cross-checked results using accuracy and F1-score.
- Integrated the trained model into a Flask web application to serve real-time thyroid disease risk predictions.

CERTIFICATIONS

- Machine Learning — NPTEL
- Web Development — Corizo
- Generative AI — Outskill
- Coding & Technical Training — GeeksforGeeks
- MATLAB Programming — MathWorks
